DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 22-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claims 22-30 are incomplete because these claims depend on cancelled claim 20. It is not possible to determine the scope of these claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 21 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mori et al. (PN 6,335,570, of record) in view of Kawaguchi (PN 5,953,628, of record).

Mori et al. discloses, as shown in Figures 13 and 18, an interconnect opening comprising:

a semiconductor structure having a first dielectric layer (2) and a lower interconnect (5);
passivation layer (6) over the first dielectric layer and the interconnect;
a stack dielectric layer (7) over the passivation layer;

an upper interconnect opening through the stack dielectric layer and the passivation layer having sidewalls consisting of an interface layer (31).

Mori et al. discloses all of the claimed limitations except the interface layer comprised of copper sulfide. However, Kawaguchi discloses an interface layer (7) between a copper layer (9) and a stack dielectric layer (3). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to form the interface layer of Mori et al. comprising copper sulfide, such as taught by Kawaguchi in order to prevent the copper from oxidation by simplifying the treatment in the vacuum or omitting the thermal treatment step at high temperatures.
